

Participant Technical Setup

Claude event credits (everyone)

Anthropic provides **\$100 of API credit per participant**.

Before the event

Please create or sign in to your Claude Console (<https://platform.claude.com/>) account **before the hackathon starts** so email verification does not delay you at the start of the workshop. You can also use an existing account.

Here is a tutorial for getting the necessary Claude Credits. Note that the credit will be added to the active account/organisation.

Claiming the event credit on Sep 23

1. Follow the claim link. It will be distributed at the registration desk on-site.
2. Sign in to/create your Anthropic account (same as in "Before the event").

3. Select "Individual" on the screen "How will you use the Claude API?"

4. Skip the initial buy credits step.

Buy usage credits to get started

Usage credits fund API calls across your projects. US\$5 is enough to build and test a first integration.

US\$5

Try the API

- ✓ Make your first API calls
- ✓ Build and test a first integration
- ✓ Try prompts before you write code

US\$20 Recommended

Build a prototype

- ✓ Iterate on your project
- ✓ Compare prompts and models
- ✓ Test your idea from start to finish

US\$100

Go past the prototype

- ✓ Build a full integration
- ✓ Test with your own data
- ✓ Refine prompts and code

5. Fill in the application page for "AGD 2026 Rare-Disease Reanalysis Hackathon (Uni Bonn / TUM Credits)"

AGD 2026 Rare-Disease Reanalysis Hackathon (Uni Bonn / TUM) Credits

Get \$100 in free API credits to build with Claude.

Getting started is easy

How to redeem your offer

Fill out the form to claim your credits. You should receive them within 2 hours. If you do not, please reach out to recruiting@claudecorps.org with [Take Home Credits] in the subject line.

Good to know

Credits expire 3 months from grant date. They apply to our first-party API only, not AWS Bedrock, GCP Vertex, or Microsoft Azure. Credits cannot be applied to subscriptions.

6. Wait for you \$100 credit to appear in you dashboard (can take up to 2 hours)

The screenshot shows the Claude Console dashboard for a user named Drew. The left sidebar contains navigation links: Default, Search Console..., Dashboard, API keys, Build, Managed Agents, Analytics, Documentation, Credits (US\$100.00), and Drew's profile. The main content area displays 'Good morning, Drew' and 'Organization credits' of \$100.00, with a 'Turn on auto-reload' link. Below this, it shows 'Spend this month' as \$0.00 and 'Token volume' as 'No activity in the last 7 days'. A 'Models' section lists Fable 5.1, Opus 5, Sonnet 5, and Haiku 4.5 with their respective capabilities. A 'Resources' section includes links to the Advisor tool, Fast mode, Batch API, and Prompt caching. The bottom of the dashboard features links for API status, Help and support, and Feedback.

The credit is valid for **90 days from the moment it is claimed.**

Please choose the path that matches your experience:

Path A — Users with no programming experience

Recommended if you have little or no programming experience, or cannot install anything on your device

You can participate using [Claude Chat](#) (recommended) and the [Claude Console](#) (more complex, for testing prompts and building repeatable AI workflows). You do not need to install Claude Code, VS Code, Git, or a terminal environment for the introductory exercises.

Note: Claude Chat (<https://claude.ai/>) is a separate system to Claude Console. The Claude credits supplied for the hackathon (details below) are for Console, given as API credit.

Path B — Users with programming and Claude Code experience

Recommended if you already have coding experience and use VS Code or a similar editor, and feel comfortable with a terminal and Git.

Alternative: use GitHub Codespaces

Instead of installing Claude Code and the other tools locally, you can open a cloud-based development environment from [your forked workshop repository](#) using [GitHub Codespaces](#). Codespaces provides a browser-based editor and terminal connected directly to your fork, and the organisers will configure it with Claude Code and the other tools needed for the challenges.

This means you do not need to clone the repository, install VS Code, or set up the development environment on your own computer. You can edit files, run commands, commit, and push from the Codespace directly to your fork. This should make it easier to share work with your team and for the technical steward to review and merge it into the team project. Codespaces may be subject to GitHub usage quotas or billing limits, so check your account before starting.

⚠️ Claude Code users: make sure you use the hackathon credits and not personal credits

Recommended software: - VS Code or another editor - Git - Claude Code - GitHub account

Before the event

Install Claude Code, either the terminal tool, VS Code integration, standalone app or any combination of the above. Follow detailed instructions for installation for your system here:

<https://code.claude.com/docs/en/overview>

After installation and claiming the event credit:

via a terminal

1. In Claude Code (run `claude` in a terminal), run `/login` . If you are already signed in, run `/logout` first.
2. Select **Anthropic Console account (API usage billing)**. Do NOT select: "Claude account with subscription"

[illegible]

3. Select **Sign in with your Console account**.

5. Run `/status` to check which account/billing method is active.

After the hackathon, run `/logout`, then `/login` again to switch back to your normal Claude account with subscription.

via VS Code

1. Click the Claude Code icon in the top right tool bar, or type `/login` in the already open Claude Code side panel.

2. Choose **Anthropic Console**.
3. Allow opening of the external link.
4. Follow prompts for login and authorisation.

Working with your team (everyone)

The workshop is designed for teams of approximately four people, combining clinical scientists and bioinformaticians. We suggest that **one experienced bioinformatician takes the role of technical steward, handling the final project repository, data, and files.**

Shared project workspace

The workshop GitHub repository is the main shared workspace for team projects.

Workshop GitHub repository:

[AGD-genome-reanalysis-hackathon](#)

1. Please fork the repo (button near the top right)

2. Keep the suggested name, leave "Copy the main branch only" checked, and click "Create fork". You find a copy of the repository in your own Github account, which you can either edit in the browser, or clone on your local machine, edit, and push changes with git.
3. Create a subdirectory for your team with a creative (and unlikely to be duplicated) name under `session-2/projects`. Please push your work here, including your final presentation and working prototype.

Talos setup

TOOO: refine instructions. Are they both for Path A and B? We should provide some more setup instructions using Claude Console

The hackathon uses a **pinned Talos 11.0.1 environment**.

The organisers will provide prepared Talos 11.0.1 outputs and workshop data so participants do not need to spend the hackathon setting up the complete Talos pipeline.

More technically experienced participants who want to work directly with Talos source code can use the following Talos 11.0.1 release: <https://github.com/populationgenomics/talos/releases/tag/v11.0.1>. This can be done using the following command, for example:

```
git clone git@github.com:populationgenomics/talos.git --branch v11.0.1
```

However, for Talos to work as a complete pipeline, many dependencies and large annotation datasets are required. We therefore recommend using the supplied output files as the basis for all challenges rather than running the pipeline during the hackathon.

Data and AI safety

Do not use patient-identifiable or confidential clinical data with Claude.

The hackathon provides synthetic/public data. Do not paste patient identifiers, confidential clinical reports, unpublished confidential patient data, credentials, passwords, API keys, or other secrets into Claude. **The organisers of the hackathon are not liable for any data privacy breaches related to participants using sensitive data with any AI-based agent or tool.**

If you get stuck

There will be on-site support, including help with Claude account setup, Claude Console, event credit claiming, Claude Code installation, login/authentication, and basic troubleshooting.

For the hackathon itself, do not build infrastructure from scratch. Start with the provided materials and get something working first.

Quick checklist

Everyone

- ☐ Anthropic/Claude account created or tested
- ☐ Email verification completed before the event
- ☐ Event claim link used when released
- ☐ \$100 Console API credit claimed
- ☐ Correct Console organisation checked
- ☐ GitHub account available
- ☐ Workshop GitHub repository accessible

Path A: Claude Chat and Console participants

- ☐ Claude Chat account accessible (web or app)

- ☐ Claude Console accessible

Path B: Claude Code participants

- ☐ VS Code or similar editor
- ☐ Git installed
- ☐ Claude Code installed
- ☐ Claude Code logged into **Anthropic Console account (API usage billing)**
- ☐ `/status` checked
